---

My family and I are very dismayed at recent "health care reform" that mandates insurance to cover contraception as a necessary part of health care. Pregnancy is not a disease to be prevented and newly conceived lives are not enemies to women that need to be gotten rid of by taking a simple pill. This so called "health care" is not health care at all because they are very dangerous methods of preventing and/or aborting babies. IUD's, emergency contraception, all contraception and surgical sterilization have life endangering (and murdering) side effects. Please stop supporting death and causing pain to women all over the world. What is wrong with having normal fertility? It is not a disease! If insurance is going to pay for these things, then why can't they pay for Natural Family Planning too? There are no side effects to that! And it is okay with all faiths, whereas contraception is not acceptable to the Catholic Church and other faiths.

Thank you for reading my email.
